

PD Dr. Fotios Alexandros Karakostis

Research Interests

- Creation and experimental validation of innovative virtual anthropological approaches for reconstructing past behaviors, including the "*Validated Entheses-based Reconstruction of Activity*" (V.E.R.A. 1.0 and V.E.R.A. 2.0) protocols, new 3D geometric morphometric techniques, and musculoskeletal biomechanics modeling.
- Reconstruction of habitual behavior and daily life across geo-chronologically diverse bioarchaeological contexts.
- Research on the evolution of hominin manual dexterity and behavior, based on postcranial skeletal remains.
- Experimental neuro-archaeological research (electroencephalography and electromyography) focusing on the cognitive and biomechanical implications of stone tool use in hominin evolution.

Publications

2024
